This general guide should be used with the companion pieces that have been developed for different categories of commodities. This guide describes the overall quantification process from start to finish, provides instructions for each step in the quantification process, and cites challenges

and examples from actual quantification exercises.

Quantification of Health Commodities

Immunoglobulin G is the major antibody containing protein fraction of blood. With significant decreases in IgG level, on either a congenital or acquired basis, there is an increased susceptibility to infectious processes ordinarily dealt with by humoral antibody (ie, bacterial infection).

001776: Immunoglobulin G, Quantitative | Labcorp

Immunoglobulins play a key role in the body's immune system. They are proteins produced by specific immune cells called plasma cells in response to bacteria, viruses, and other microorganisms as well as exposures to other substances that are recognized by the body as "non-self" harmful antigens. This test measures the amount of immunoglobulins A, G, and M (IgA, IgG, IgM) in the blood and, in ...
